1. (currently amended): An apparatus for carrying and delivering pourable product, the apparatus comprising:
 - a bag having first and second sidewalls and an interior region containing seed;
 - the bag having a rectangular-like shape, a vertical centerline and a pouring region formed on one side of the centerline; and
 - a non-rigid handle operably connected to the bag, the entire handle being on an opposite side of the vertical centerline from the pouring region.
 2. (original): The apparatus of claim 1, wherein:
 - the bag has an end edge and oppositely disposed corners formed along the end edge; and
 - the handle is adjacent to one corner and the pouring region is adjacent to the oppositely disposed corner.
 3. (previously presented): The apparatus of claim 2, wherein the first sidewall is attached to the second sidewall at a region adjacent to the handle.
 4. (original): The apparatus of claim 3, further comprising additional material, the additional material being attached to the bag adjacent to the handle, thereby increasing the strength of the bag adjacent to the handle.
 5. (original): The apparatus of claim 4, wherein the handle is defined by a hole defined by the first and second sidewalls.
